

Assigned Link Numbers

This announcement modifies the official host-to-host protocol, and updates the defining documents [NIC 8246, NIC 9347]. Please note that the information on page 28 of "Host/Host Protocol for the ARPA Network" about link number assignments is updated by this note, and that a previous update [RFC 317, NIC 9347] is completely replaced. The modification is minor and should have no effect on existing network programs or usage. Four of the reserved link numbers are hereby assigned for experimental use in the testing of an internetworking protocol defined by Kahn and Cerf.

Description:

Control Link

Link 0 is assigned for use as the host-to-host protocol control link.

Data Links

Links 2-71 are available for use in connections as provided by the host-to-host protocol.

Internetworking Protocol

Links 155-158 are to be used for experiments with the Internetworking Protocol.

Measurements

Links 159-191 are assigned for use in measurements under the direction of the Network Measurement Center at UCLA.

Message Switching

Links 192-195 are to be used for experiments with the Message Switching Protocol.

Private Experiments

Links 196-255 are available for private experimental use.

Reserved

Link 1, and links 72-154 are reserved for future developments and experiments and currently are not to be used.

Table:

Link Number	Assignment
0	Control Link
1	Reserved
2-71	Connections
72-154	Reserved
155-158	Internetworking Protocol
159-191	Measurements
192-195	Message Switching Protocol
196-255	Experimental
